SUMMARY

Motivated Computer Science student with a growing interest in AI/ML and Python development. Eager to learn and improve, I enjoy working with data, experimenting with models, and applying concepts to solve practical problems. I'm seeking an opportunity to build real world experience and contribute to meaningful projects.

PROJECTS

AskWeb [Live Demo](#) [Source Code](#)

- AskWeb is a smart browser assistant that let users have a real-time conversation with websites like a chatbot.
- Integrated the HuggingFace 'all-MiniLM-L6-v2' embedding model to transform scraped web text into vectors.
- Retrieval-Augmented Generation (RAG) system that splits web content into semantic chunks and stores them in a local vector database.
- Integrated Gemini 1.5 Flash via LangChain Expression Language to achieve near instant response times. Optimized the retrieval process (k=30) to balance high factual accuracy with the speed required for a seamless browsing experience.

Tech: React, FastAPI, Gemini 1.5 Flash (LLM), ChromaDB, LangChain (LCEL), Docker.

UPI Fraudulent VPA Pattern Detector [Live Demo](#) [Source Code](#)

- Developed a tool to spot potential scams in UPI payments by analyzing Virtual Payment Addresses (VPAs) and transaction patterns.
- Used Python to process synthetic data and applied machine learning to detect suspicious activities, achieving **85% accuracy** in identifying fraud. Built a simple web app to show results.

Tech: Python, scikit-learn, Flask, Tesseract-OCR, HTML, Vanilla JS

Developer Burnout & Code Quality Predictor [Live Demo](#) [Source Code](#)

- Created a system to predict developer burnout and code quality by analyzing GitHub commit patterns.
- Extracted features like commit frequency and message sentiment using Python and NLP, then used Random Forest to predict burnout risk with **78% accuracy**. Visualized trends in a dashboard.

Tech: PyGitHub, NLTK, Plotly

EDUCATION

Master of Science in Information Technology

2024 – 2026

University of Mumbai, Mumbai, Maharashtra

- Relevant Courses:** Data Science, Artificial Intelligence, Soft Computing, NLP, Machine Learning.

Bachelor of Science in Computer Science

2021 – 2024

University of Mumbai, Mumbai, Maharashtra

- Relevant Courses:** Operating Systems, Networking Basics, Programming Fundamentals, Data Structures.

SKILLS

Languages & Databases: Python, JavaScript, C++ | MySQL, MongoDB

Frameworks / Libraries & Tools: FastAPI, React.js, Scikit-learn, Pandas, NumPy, PyTorch | Git, Docker, GCP(Foundational/Basics)

CERTIFICATIONS

- Oracle Data Science
- Google AI Essentials
- Google IT Automation with Python
- IBM DevOps Fundamentals
- Microsoft SC-900
